

Setting Up Power Functions

This document describes the steps to set up and use LEGO Power Functions components for the DIYnamics Technics Table.

Attach the end of the wire emanating from the vertically mounted XL Motor to the receptor on the Battery Box (highlighted above).

To turn on the XL Motor, press the green button on the Battery Box.

To change drive wheel's rotation direction, slide the orange switch on the Battery Box (towards green button is counterclockwise and away from green button is clockwise).
